

### The invisible risks revealed

In the wake of COVID 19, everyone's now clear on just how deadly airborne viruses can be.

What's less clear is exactly which airborne dangers we encounter every day in the environments where we work, shop, relax and are cared for.

Air pollution can be as dangerous as airborne viruses. It accounts for 43% of lung disease deaths and 25% of heart disease deaths. And yet this deadly threat is often overlooked.

Our **Air Quality Audit** is here to change that.

### Shining a light on dangers in the air

Our **Air Quality Audit** is designed to identify exactly which viruses, bacteria and pollutants are present in any environment's air.

Carrying out background bacteria level sampling to measure airborne microbes, as well as taking air samples to check for air pollutants, including nitrogen dioxide and carbon monoxide, our audit quickly highlights areas of low quality air or where the use of a space may create an increased risk of infection.

By providing a clear picture of these invisible risks, our **Air Quality Audit** will help you protect staff, shoppers, patients, everyone against unseen airborne dangers, from Covid 19 to seasonal flu.

### Make every space safer

Restricted space. Poor ventilation. High footfall. Whatever the challenges of your site, we will work with you to develop an air quality improvement strategy.

Armed with an Air Quality Audit, we can quickly and easily tailor our **CleanLight** solution to suit your environment.

**CleanLight** is a powerful LED panel proven to destroy deadly airborne viruses, reduce air pollutants and purify odours and toxins in the air, wherever it shines.

Plus, if you go ahead with **CleanLight**, we'll refund your **Air Quality Audit** cost\*.

\*Costs of air quality audit are credited against verified purchase of CleanLight panels from an approved reseller.
